

Section E: Personal Reflection

35. I was drawn to **Data Ethics and Governance**. What really caught me off guard was seeing how easily bad historical data can lead to real-world harm. I found it interesting or perhaps eye-opening how AI algorithms have the potential of building discrimination right into hiring software or predictive policing tools.

36. I found **APIs (Application Programming Interfaces) and associated tools** to be the most difficult concepts to grasp. Trying to visualize how different applications pass information back and forth behind the scenes and wrapping my head around concepts like REST protocols, HTTP methods, and securing API keys felt abstract at first.
